

General Information

Running a business is difficult enough without the headache of managing multiple providers and worrying about redundancy. At C4L we keep it simple. We provide you with the entire solution, with one easy network and company to deal with.

C4L was launched in 2000, where we found there to be a gap in the market for businesses offering a complete solution. Traditionally companies have gone to multiple providers and suppliers to find the right Internet solution. We offer a personalised and friendly service, with the infrastructure and resilience of a large international company.

Our network has been designed for speed and redundancy. Providing 100's of ISPs, streaming, hosting and gaming companies with transit services.

Our services include IP Transit, Colocation, Interconnects, Voice Over IP (VoIP), and Leased Lines and Peering.

Our combination of high SLAs and latest technology enables us to adapt our services to suit your company's requirements.

C4L serves over 250 major customers, in over 20 UK data centers, connecting over 100,000 servers and machines, making it one of the largest independent Internet Service Providers in the UK. With well over 10Gbps external connectivity and trading successfully since 2000, we have a proven track record as one of the UK industry leaders as a multihomed transit provider.
