

Central London

London

C4L is pleased to offer extensive colocation options in the central city data centre in London. This data centre is ideal for local colocation from 1 rack to full suites, with extremely fast, high capacity connectivity.

This data centre has 24/7 manned security, with single point access to guarantee the security of your equipment, also supported by CCTV coverage throughout the facility. It has VESDA installed, and N+1 power to ensure maximum resiliency for your solution.

This facility is part of the C4L multiple 10 Gigabit network and is connected to most major data centres across the UK and the Netherlands. The site provides 100s of carriers, and direct connectivity to Internet Exchanges such as LINX. All customers are provided with direct access to our Network Operations Centre with customers' connections being monitored 24x7.

Using the central London data centre comes with all the benefits you'd expect from one of the largest private networks in the UK, such as discounted rates, high speed IP Transit at low prices, Interconnects to all other major UK data centres, and high volume Data Backup amongst many other services.

C4L has over 10 years industry experience, and has one of the UK's largest data centre footprints. This, combined with managed data storage and connectivity products, and impeccable customer relationship management is the reason why over 500 core clients and millions of end users across the UK rely on C4L's services.

Power

- AC power voltage: 230 Volt or 400 Volt (32 or 64 Amp)
- AC 230 V power breakers: 16 or 32 Amp
- DC power voltage: 48 Volt
- Dual diverse power feeds available to racks

Air-Conditioning

- Equipped with redundant cooling equipment
- Multiple air conditioning units with N+1 configuration provide redundant capacity.
- Room temperature is maintained at $22^{\circ}\text{C} \pm 2^{\circ}\text{C}$ and a humidity level of $50\% \pm 10\%$.

Fire Protection & Security

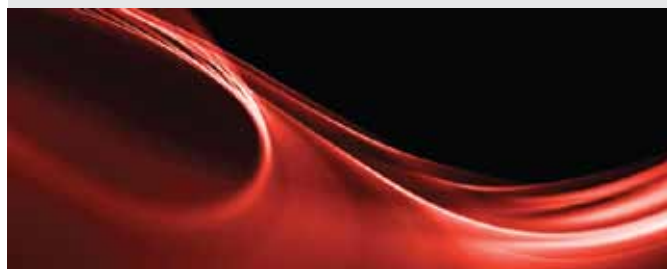

- Very Early Smoke Detection Alarm (VESDA) system
- Fire detection and gas-based fire suppression systems
- Systems are automatic and monitored continuously (24 x 7)
- State-of-the-art security system to prevent unauthorized access to your equipment
- Proximity cards, biometric readers and man traps, access is limited to authorised personnel

Communications

- Layer 2 Transit with Tier1 providers
- Distributed Colocation Options from single U's to suites
- Direct connectivity onto one of the UK's largest multiple 10Gbps Metro Networks owned by C4L
- Multiple Tier 1 providers over C4L network
- Premium Connectivity Services
- Reliability of one of the UK's largest independent colocation providers
- Interconnects available direct to over 25 data centres across Europe

Onsite Services

- 24x7 Onsite engineers and remote hands
- Restrooms and kitchen facilities available
