

# CONNEXIONS 4 LONDON

**Co-location or server hosting is the location of a web server in one of C4L's secure data centres across the UK and Europe.**

**You provide the server and we provide everything else - rackspace, connection to the Internet, IP Addresses, remote back-ups, DNS, in short everything you need.**

If you are looking for ultra high redundancy, reliability, security and connectivity, then C4L can supply a fully managed solution to ensure a fast and reliable connection to the internet.

With our co-location we provide you direct connectivity onto our industry leading network. We can provide you with a selection of connectivity options. These can be from simple GB transfer rates up to dual or quad feed Gigabit fibre connections. We have one of the largest networks of any Tier2 carrier in the UK. You can decide to take advantage of our multi-homed transit or take a direct Tier 1 feed.

We are continually building on our network and adding further redundancy and monitoring tools to offer the maximum service available. We have also been involved in some of the UK's largest content events. Our network has supported bandwidth and streaming media for companies such as:

BBC Music downloads  
Panasonic  
Live 8  
Channel 4  
Sony BMG  
Information TV  
Classic FM  
MANX Telecom  
AEG
