

## Harbour Exchange

### Docklands

C4L is pleased to exclusively offer colocation options in its Harbour Exchange data centre, in central Docklands, London, the heart of the UK's Internet. The site offers a full range of power, rack and suite options with the ability to easily expand as required.

This data centre is located in the heart of Docklands. It features fire protection systems, specialised heat and smoke sensors, raised flooring, scalable power for future expansion, 24x7 technical support 365 days a year and multi level security.

This facility is part of the C4L multiple 10 Gigabit network and is connected to most major data centres across the UK and the Netherlands. All customers are provided with direct access to our Network Operations Centre and all customers' connections will be proactively monitored 24x7 by our team.

Using the Harbour Exchange data centre comes with all the benefits you'd expect from one of the largest private networks in the UK, such as high speed IP Transit up to 10Gbps at low prices, Interconnects to all other major UK data centres, and high volume data backup and many other services.

C4L has over 10 years industry experience, and has one of the UK's largest data centre footprints. This, combined with managed data storage and connectivity products, and impeccable customer relationship management is the reason why over 500 core clients and millions of end users across the UK rely on C4L's services.

### Power

- UPS system – redundant parallel formation @ N+1
- 2.2 MVA of power to building
- UPS conditioned power @ N+1
- Diverse Power Feeds from separate transformers
- Dual power feeds from diverse PDU's available with each rack
- Diesel generator back-up

### Air-Conditioning

- Close control downflow air conditioning units to guarantee stable temperature and humidity @ N+1

### Fire Protection & Security

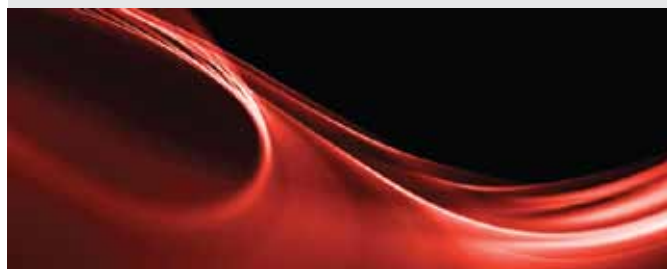

- Very Early Smoke Detection Apparatus (VESDA) installed
- Smoke detection system
- Fire suppression system
- CCTV system covering all entrances/exits and main areas
- 24-hour video recording
- Full perimeter alarm
- PAC security card access system
- Visual verification of all persons entering the data floor

### Communications

- Multiple Providers including C4L, BT, NTL, Geo, Level 3
- Multiple Internet Service Providers
- Remote Data Backup/Storage

### Onsite Services

- Goods lift
- Separate goods delivery area away from data floor
- Onsite cafe for engineers
- Bookable engineers/remote hands
