

## IFL2

### Manchester

C4L is pleased to offer extensive colocation options in Manchester. One of the core data centre locations outside of London, Manchester is the ideal location for colocation and non London reliant connectivity. This makes it ideal for disaster recovery.

This purpose-built data centre features an exceptionally highly specified infrastructure to include the latest gas-based fire protection systems, specialised heat and smoke sensors, raised flooring, scalable power for future expansion, 24x7 technical support 365 days a year and unmatched levels of security.

The facility is part of the C4L network and is connected to most major data centres across the UK and the Netherlands. All customers are provided with direct access to our Network Operations Centre and all customers' connections will be proactively monitored 24x7 by our team.

This data centre comes with all the benefits you'd expect from one of the largest private networks in the UK, such as high speed IP Transit, Interconnects to all other major UK data centres, and high volume Data Backup amongst many other services.

C4L has over 10 years industry experience, and has one of the UK's largest data centre footprints. This, combined with managed data storage and connectivity products, and impeccable customer relationship management is the reason why over 500 core clients and millions of end users across the UK rely on C4L's services.

#### Power

- Dedicated onsite transformer
- Standby Diesel Generators as back-up
