

Data Centre Interconnects

C4L is the UK leader in neutral data centre connectivity with over 25 UK data centres on-net and providing up to 10Gbps point to point circuits. Through our partner agreements we can also reach over 200 PoP's worldwide, making **C4L** the ideal option for any data centre interconnect requirements.

C4L has also consistently shown as one of the UK's fastest networks and classed by Renesys in 2009 as being in the UK's top 20 fastest growing network providers. **C4L** provides its connectivity at all core sites over its high quality multiple 10Gbps UK network.

As our data centre point to point service is completely transparent, this service creates a whole new avenue of possibilities for your business. It allows you access to more data centres, giving you the option to backhaul customer traffic back to your core network, without the extra cost of installing equipment at the site. You are no longer restricted to hosting in one data centre.

The Interconnect service can be configured to use 802.1q, enabling you to have full confidence that the traffic which traverses over the circuit is secure and can support multiple VLANs (QinQ). All **C4L** services are fully monitored, and come with a 99.95% SLA as standard, or 100% SLA for dual port.

We have a very simple pricing model between our core sites, you just pay a one-off fee for 10Mbps, 100Mbps, 1 GigE or 10 GigE ports with no data transfer fees in all core PoPs. Our price guarantee ensures we have the most competitive pricing in the market.

C4L has over 10 years industry experience. Combined with its industry leading data centre network and its impeccable customer relationship management, it is the market leader. This is the reason over 500 core clients and millions of end users rely on **C4L**'s network.

Network

- All Cisco network
- Available in over 25 data centres across the UK and in Amsterdam
- Over 200 PoPs through partner networks
- High quality resilient multiple 10 Gbps network
- Multiple routers/switches for diverse connectivity at every core data centre
- Provided as a VLL (Virtual Leased Line) over VLAN
- Connections provided over dual diversely routed VLANs
- Private network over dark fibre for all core PoPs
- Dedicated UK Network Operation Centre (NOC)

Service

- 10Mbps, 100Mbps & 1000Mbps ports as standard (10Gbps ports available)
- 100% Network Service Level Agreement with dual port option
- Ideal for connecting your own backbone, connecting to 3rd party providers or extending your own services
- Aggregated ports available
- Multiple ports available in any chosen configuration
- Only 1 fee per data centre, no matter how many additional circuits
- QinQ (802.1q) available
- Fixed pricing across all core data centres
- Additional services including Wholesale bandwidth/transit, off site backup, DDOS Protection, Firewall Connection
- PRICE GUARANTEE: We will not be beaten on price for an equal service at any core PoP
- Service Provider / Telco channel for resellers
