

IP Transit / High Capacity Bandwidth

Undoubtedly, C4L's bandwidth service has it all; low latency, maximum redundancy, and superb availability with over 25 data centre points of presence across the UK. C4L has also consistently shown to be one of the UK's fastest networks and is classed by Renesys as being in the UK's top 20 fastest growing network providers in 2009.

C4L provides its connectivity at all core sites over its high quality multiple 10Gbps UK network. Our Internet connection includes our 100s of direct connections with ISPs and multiple Tier 1's including Tiscali, NTT and TATA.

With our multiple providers, connections and routers, we are able to ensure the fastest and most reliable connections for our customers. This is ideal for gaming, VoIP, media or streaming and web hosting companies, and is one of the reasons why our network supports some of the UK's largest hosting and media companies.

Our suppliers have been carefully selected to provide global high speed connectivity. Another strength of C4L's network is its resiliency; in the event of a Tier 1 provider experiencing downtime, the network automatically re-routes within milliseconds.

The IP transit we provide is completely burstable up to line speed, whether your connection is 100Mbps or 10Gbps. Such is our level of confidence with our bandwidth, we offer a one month free usage trial up to 100 Mbps. After this month, if you're not completely satisfied you can leave, with no cancellation fees.

Available as our high quality multihomed IP transit, direct BGP4 Tier 1 connectivity (without our AS number) or as our very cost effective Partial BGP Transit which includes over 90,000 routes and over 1/3 of the Internet.

We have an uncompromising attitude to quality, which has seen us gain ISO 9001, as well as ISO 27001 signalling our commitment to the information security of our customers.

Network Design

- All Cisco network
- Available in over 25 data centres across the UK and in Amsterdam
- Tier 1 connectivity available in over 200 PoPs world wide
- 100Mbps & GigE ports as standard (10Gbps ports available)
- 100% Network Service Level Agreement with dual port option
- DDOS Protected Bandwidth Option
- Firewalled connection Option
- High quality resilient multiple 10 Gbps network
- Aggregated ports available

System Capabilities

- Perfect for VoIP, streaming, gaming operations, and other bandwidth intensive operations
- Alerts available should the connection fail on your equipment
- Multihomed transit, Tier 1 transit, partial transit, Interconnects and offsite data storage

Billing and Pricing

- 95th Percentile billing
- Online customer portal with detailed bandwidth and port usage details
- Direct Tier 1 from £5/Mbps (typical cost based on 1000 Mbps connection)
- Multihomed from £4/Mbps (typical cost based on 1000 Mbps connection)
- Partial Transit from £1/Mbps (typical cost based on 100 Mbps connection)
- Price Guarantee, we won't be beaten on price or equal quality service
- Wholesale aggregated ports available for discounted multiple sites
- Wholesale and reseller rates available.

Providers

- Our Tier 1 Providers include Tiscali, NTT and TATA
- We also have over 200 peering agreements, combining to generate high speed IP transit.
