

# Off Site Data Storage & Backup

Understandably, you've heard a lot recently about the consequences of failing to backup your data. It's hardly surprising that 43% of companies who suffer a major loss of computerised data never reopen.

We know what you're thinking: it will never happen to you, so why bother with time consuming and expensive backup tapes which often become corrupted? We totally agree, you shouldn't. C4L offers a secure, off-site data storage and backup platform, for significantly less than standard tape based systems. The backup is customisable to your preferences, in that it can be automated or manual, and works across many applications that require application-specific support to ensuring your most important data is safeguarded.

Your data will be stored on our storage platform and can then be mirrored to a secondary server in an alternative location. This mirroring, which comes as standard with C4L's backup package, enables your business to be safe in the knowledge that your data is secure in case of hardware failure, fire or natural disaster.

We are the only company in the UK to offer the added option of connecting direct over a private connection at up to 10Gbps in the majority of UK data centres. This means unlimited data transfer and no bandwidth bills from your suppliers.

C4L offers fantastic pricing due to operating on a much larger scale than standard storage and backup providers. Utilising these economies of scale, we provide a more cost-effective, yet no less secure storage and backup service. C4L also possesses the infrastructure to guarantee the integrity of your data, with one of the UK's largest private networks, able to transfer over 10 million Gigabytes per month.

With so much compelling you to act now, why wait until its too late to back up your data?

## Features

- **PRICE GUARANTEE** : Our pricing beats any other UK storage company
- Access to your data 24/7 365 days a year
- No data transfer costs
- Direct secure 10Mbps, 100Mbps, 1Gbps and 10Gbps connections available in over 25 UK Data centre
- One monthly fee
- No bandwidth bills from your suppliers with our data centre connect service
- Easily increase your storage space as your requirements grow
- Storage available up to 1 Petabyte (1,000,000 GB)
- Plain storage and agent-based backup options available
- Wholesale/Reseller channel pricing available

## Hardware

- Dedicated storage platforms featuring redundant power, cooling and disk configurations
- Data integrity assured through RAID 6 or RAID 1+0 on all volumes
- All hard drives used are low power, therefore better for the environment
- Industry leading hardware and connectivity enables 10Gbps direct connectivity

## Software

### Storage

- Block level storage presented through iSCSI
- File Level storage presented through FTP, NFS or SCP/SFTP
- Choice of encryption options to ensure 100% security

### Backup

- Backup provided using a software agent available for Windows, Linux BSD, MacOS, Solaris, AIX, HP-UX and Novell NetWare
- Backup applications : Microsoft SQL Server, Microsoft Exchange Server, Microsoft Volume Shadow Copy, MySQL, Oracle, Lotus Domino Server

## Location

- Our primary and backup data storage platforms are housed in high specification data centres in the UK, on separate power grids and geographical diverse locations for redundancy purposes.
